

# iDOO Desktop System Instructions

## CLEANING

**After a complete harvest, it's time to give your unit a proper clean so you're ready to go again!**

1. Unplug the system and ensure all electrical components are off.
2. Remove and discard any remaining plants, plant material and grow sponges. (Do not discard plastic planting baskets, these can be reused!)
3. Empty reservoir
  - Pro tip: If you have some indoor plants or an outdoor garden you can use this nutrient rich water to water them!
4. Disinfect
  - Create a vinegar/water solution in a spray bottle (1 part vinegar to 5 parts water). Spray the solution liberally inside the reservoir (or fill the reservoir with the solution) and let it soak for a few minutes. Use a sponge or scrub brush to remove debris and buildup
  - Repeat for planting baskets and reservoir cover
5. Rinse reservoir, planting baskets, and cover to remove vinegar solution
6. Fill the reservoir halfway with clean water and turn on the pump. Let water run for a few minutes to remove any unseen debris.
7. Empty the reservoir and let the system air dry
8. Pro tip: if you have hard water you might see scaling in your system. You can use powdered citric acid mixed with a bit of water and apply to scaling. Let sit for a few minutes, scrub, then rinse.

**Now, you're ready to start planting again!**
